

Assignment 1

Make a program that has two variables, an integer (`int`) and a `String`.
(Strings are any text that are in " ", like words, sentences ...).

- Create the variables
- Assign a value to them
- Print them out
- Change the values
- Print them out again

Example of output:

Alexis is 30 years old

Alexa is 31 years old

or

I have 20 dollars.

I have 99 bottles of beer.

- ▶ To print text, enclose it in quotes: `System.out.println("Hey there");`
- ▶ To join text to numbers or variables, use a `+` (*ie. concatenation*)
`System.out.println("My name is " + name);`
- ▶ Do not enclose variable names in " " if you want the contents of the variables to be printed out.
